Canva Editing Guide

KHYXX DIGITALS • EDITABLE WEDDING TEMPLATES

Thank you for your order! This guide walks you through customizing your template in Canva. The menus can look slightly different depending on your Canva version or device, so if a button has moved, look for the same word nearby.

1. Before you start

- Make sure you are logged in to a Canva account (a free account is enough to edit and download most templates).
- Use a laptop or desktop if you can. Editing works on the phone app too, but a bigger screen makes it easier.
- Keep your details ready: names, date, venue, schedule, RSVP contact, and any photos you want to use.

2. Open your template

1. Open the Canva link from your order page (Track Order → your order code).
2. Click **Use template** (sometimes shown as *Customize this template*). Canva makes your own copy.
3. Your copy is saved in your Canva account under **Projects**, and the original link stays untouched, so you can always come back to the link for a fresh copy.

3. Replace the text

1. Double-click any text to edit it. Type your names, date, venue, and details.
2. Check every page: some details, like names or dates, repeat on several pages.
3. If your text becomes too long, make the text box wider or reduce the font size a little instead of squeezing the words.

4. Change fonts and colors

1. Click a text box, then use the font name at the top to pick a different font. Keep to two fonts so the design stays elegant.
2. To change a color, click the element or text, then click the color square at the top and choose a new shade.
3. Elements with a small crown icon are Canva Pro items. If you see one and don't have Pro, message us and we'll help you swap it.

5. Add your own photos

1. Open the **Uploads** tab on the left and upload your photo.
2. Drag the photo onto a photo frame in the design. It will fill the frame automatically.
3. Double-click the photo to move or zoom it inside the frame.

6. Pages

Use the page buttons above each page to duplicate, delete, or reorder pages. For wedding website templates, keep the page order the same as the template so the buttons and links keep working.

7. Save and download

1. Click **Share** → **Download**.
2. For **printing**, choose **PDF Print**. If your print shop asks for it, also tick crop marks and bleed.
3. For **sending online** (chat, email, social media), choose **PNG** or **PDF Standard**.
4. For **wedding website** templates, use the Share menu in Canva to publish your page as a website and copy your link.

Before you finalize, read every line out loud and ask someone else to proofread names, dates, and times. Printed mistakes are the hardest to fix.
